

INTERNATIONAL INTERNSHIP

LOCATION: PARIS, FRANCE | COMPANY: INSERM

JACOB HUNTER

La science pour la santé
From science to health

COMPANY DESCRIPTION

INSERM is the French National Institute of Health and Medical Research. It is a governmental organization and a public research institution. INSERM partners with several university hospitals throughout France, including the Sorbonne University of Medicine. There are 281 research units, 36 clinical investigation centers, and 34 service units within INSERM. The organization is committed to improving human health through research, technology, and scientific study.

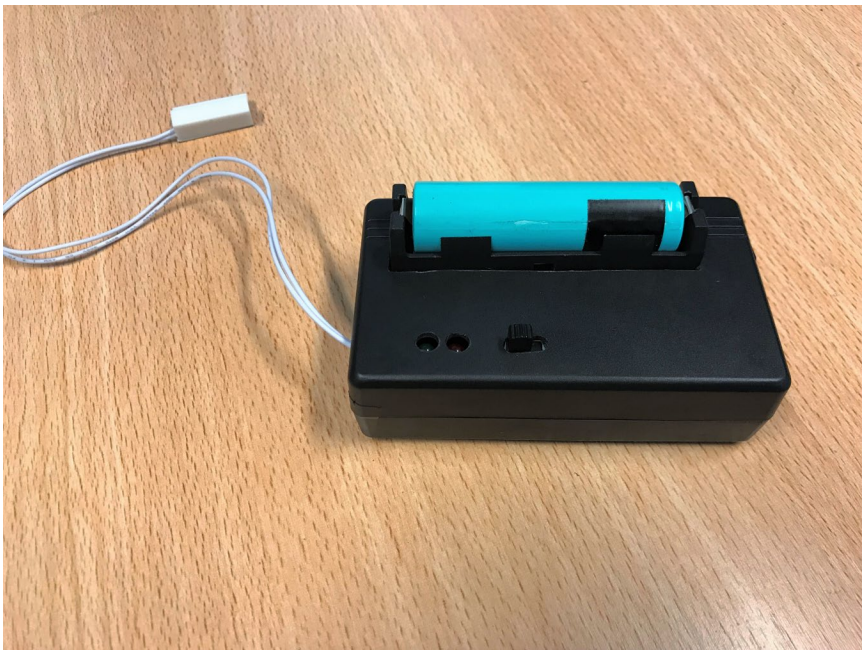

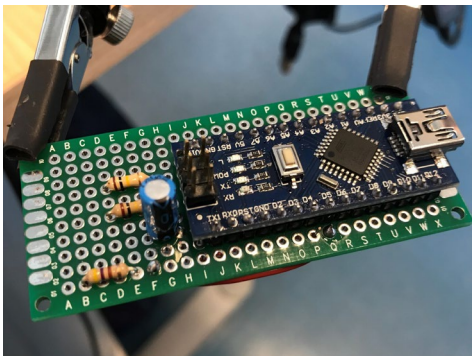

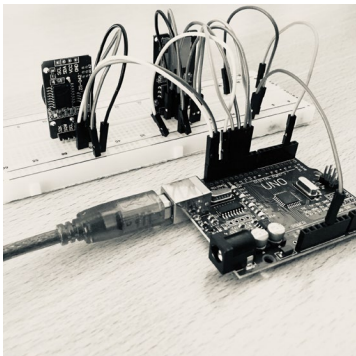

PROJECT DESCRIPTION

I interned in the Pierre Louis Institute of Epidemiology and Public Health, a partnership between INSERM and the Sorbonne University of Medicine. My team focused on collecting air pollution data to identify trends between diseases and air quality. Due to occupational and lifestyle changes, it has become increasingly important to identify the health risks of air pollutants in our homes and offices. Thus, I developed a door & window sensor to help effectively model indoor air pollution.

ACCOMPLISHMENTS

- Iterated through the product development process several times, creating four prototypes, each one more compact and more user-friendly
- Improved the battery life of the sensor by 233% through an interrupt and a deep sleep mode
- Developed a sleek, compact and autonomous sensor which records the date, time, temperature, and door/window state every time the door/window opens or closes

LESSONS LEARNED / IMPACT MADE

- Great projects and advancements can be accomplished with limited resources
- What started as a side project became a focus and opened possibilities for future models and academic publications
- Beginning prototypes were used with air pollution sensors to collect real, indoor data
- Lasting friendships and memories were created
